

## Safeman Instructions

### IMPORTANT :

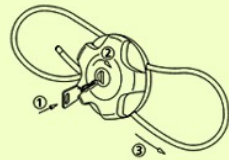

You only need the key to release the cable when **unlocking** your Safeman.

**DO NOT try to lock the SAFEMAN with the cable still inserted through the lock housing.**

### To Lock

<p>Hold the star shaped upper part in one hand. While holding the star, pull the cable <b>all the way out</b>. You may have to rotate the bottom housing a little to release the cable end.</p>	
<p>Insert the cable through or around the object you are locking up and then through any of the 4 openings in the black lock housing. Pull the cable tight. You can make a second loop with the remainder of the cable. That's IT.</p>	

### To Unlock

<p>Insert the key and turn it clockwise. This releases the cable grippers inside the lock. Pull the cable out completely from the lock housing. After the cable is removed, turn the key back into locked position and remove the key. <b><u>(The key cannot be turned to locked and/or removed until the entire cable has been removed from the lock housing openings)</u></b></p>	
<p>After removing the key, hold the star portion of the lock. Stow the cable by rolling the black lock body in either direction</p>
